

SAFETYSUITE

TESTED FOR LIFE

At RedGuard, we combine all the engineering behind the industry's best successfully tested blast-resistant buildings with the virtually unlimited amenities of a traditional brick and mortar office building. We put the power in your hands with options like wall coverings, custom cabinetry, restrooms, and even the building's overall size. The only things off limits are our unparalleled standards for strength and safety.

SafetySuite: Safety demands in hazardous environments are multifaceted. Recognizing this, RedGuard offers SafetySuite—a line of fully customizable, modular blast-resistant buildings engineered to meet your specific safety requirements. These steel-constructed structures are designed to withstand blast pressures up to 15 psi, ensuring robust protection against potential explosions. Beyond blast resistance, SafetySuite buildings can be tailored to address various hazards, including fire, toxic gas, and flying debris, based on comprehensive hazard analyses conducted by independent third-party engineers. This approach ensures that each building provides precise protection without unnecessary over-engineering, optimizing both safety and cost-effectiveness.

The Process: When your project starts we'll work directly with you to develop an overall concept. During this phase, we'll study your site plan and look at any existing buildings that need to be considered. Next, we'll review your day-to-day operations to determine a solution that will fit your unique needs. We'll quickly transform the concept into a full architectural design before sitting back down with you to choose your building's finishes.

Construction: When it comes time for construction, SafetySuite buildings are produced in a short timeframe and at a fraction of the cost of traditional brick-and-mortar buildings. Because they're prefabricated in a controlled environment, construction timelines are more predictable and not subject to weather delays or site-based interruptions. Every structure undergoes rigorous quality control inspections before leaving the manufacturing facility, ensuring it meets both safety and performance standards.

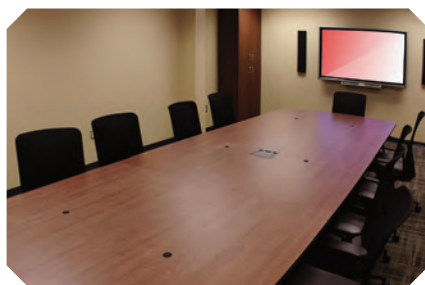

Since SafetySuite buildings are built off-site, your operation stays up and running with no disruption. Installation is fast, requiring minimal site prep, and the turnkey process ensures a smooth handoff so your team can get to work in a secure space right away.

A SafetySuite provides the space you want and the protection you need. Some custom designs have included strategic control rooms, executive offices, laboratories and conference rooms, but the possibilities are endless.

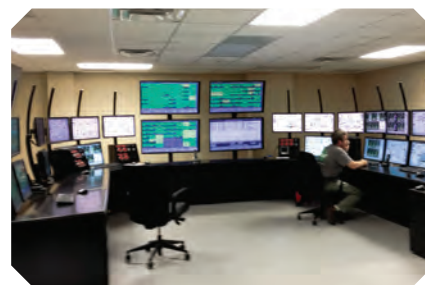

Kitchen and Dining

Grab a bite to eat and relax in complete security.

Conference Room

Enjoy state-of-the-art comfort and protection in your meetings.

Control Room

Control surveillance, access and much more under one secure roof.

RedGuard builds modular solutions that protect lives and assets. It is the leading supplier of blast-resistant buildings and modular safe spaces. RedGuard's other innovative divisions and product lines specialize in modular safe structures, most with threat mitigation. The company is dedicated to five key disciplines: concept, design, build, installation and operation. Its success across these areas of expertise has led some of the world's largest organizations to trust their employees' lives to RedGuard products.
